

Photo Booth Integration Brief for Darwinbox

Project Overview

The Photo Booth Integration project is designed to connect a physical or web-based photo booth system with the Darwinbox HR platform for employee engagement activities, corporate events, onboarding campaigns, branding activations, and internal celebrations.

The system allows employees or guests to:

- Capture photos using a booth or tablet
 - Enter employee/event details
 - Apply branded overlays or frames
 - Store event participation data
 - Automatically sync participant details with Darwinbox
 - Share photos via email, WhatsApp, or QR code
-

Objectives

- Improve employee engagement
 - Collect participant data during events
 - Automate attendance/participation records
 - Generate branded event memories
 - Sync employee information from Darwinbox
 - Enable HR teams to track event participation
-

Key Features

1. Employee Authentication

Users can:

- Login using Employee ID
- Scan QR code
- Use OTP/email verification

- Select from employee directory synced from Darwinbox
-

2. Photo Capture

Supported options:

- Webcam
- DSLR camera integration
- iPad/Tablet camera
- Mobile browser camera

Features:

- Countdown timer
 - Multiple shots
 - Retake option
 - Live preview
-

3. Branding & Templates

Admin can configure:

- Event frames
- Company logo
- Event hashtags
- Dynamic employee name tags
- Festival/company branding

Example:

- Annual Day
 - Team Outing
 - Diwali Celebration
 - Onboarding Day
-

4. Darwinbox Integration

APIs Used

Possible integrations:

- Employee Directory API
- Attendance API
- Event Participation API
- SSO Authentication
- Webhooks

Data Sync Flow

1. User enters employee ID
 2. System fetches employee details from Darwinbox
 3. User captures photo
 4. Participation record created
 5. Photo URL stored
 6. HR dashboard updated
-

System Architecture

Photo Booth Device

Frontend Application
(React / Web App)

Backend API Server
(Node.js / Express)

Darwinbox APIs

Database / Cloud Storage
(AWS S3 / Firebase)

Suggested Tech Stack

Frontend

- React.js
- Next.js
- Tailwind CSS
- WebcamJS / MediaDevices API

Backend

- Node.js
- Express.js

Database

- MongoDB
- PostgreSQL

Cloud Storage

- AWS S3
- Cloudinary

Authentication

- OAuth 2.0
 - JWT
 - SSO
-

Admin Dashboard Features

- Event creation
 - Template management
 - Employee participation logs
 - Photo gallery
 - Export reports
 - QR code generation
 - Analytics dashboard
-

Photo Sharing Options

Users can:

- Download image instantly
 - Receive via email
 - Share through WhatsApp
 - Scan QR code to download
-

Security & Compliance

- Secure API authentication
 - HTTPS encryption
 - Access control for admins
 - Consent popup before capture
 - GDPR/company privacy compliance
-

Use Cases

HR Events

- Employee engagement
- Annual day
- Townhall
- Rewards & recognition

Recruitment Events

- Campus hiring
- Walk-in interviews
- Hiring campaigns

Corporate Branding

- Social media campaigns
 - Employee advocacy
-

Deliverables

Phase 1

- Basic photo booth app
- Darwinbox employee lookup
- Photo capture & storage

Phase 2

- Analytics dashboard
- QR code sharing
- WhatsApp integration

Phase 3

- AI filters
 - Face recognition
 - Auto-tagging
 - Event gamification
-

Sample Workflow

Estimated Modules

Module	Description
Authentication	Employee verification
Photo Engine	Camera & capture
Template Manager	Branding overlays

Integration Layer	Darwinbox API handling
Sharing Service	WhatsApp/email delivery
Dashboard	Admin analytics

Future Enhancements

- AI background replacement
- GIF/boomerang support
- Instant printing support
- Badge generation
- Face filters
- Multi-language support
- Event leaderboard
